

# Forage Finance

## Earn money. Build and trade your own asset bundles.

Forage is a social investing platform for earning money and owning tokenized equities, independently or through eligible traders. **Discover together. Own individually.**

### Earn with a funded source

Collected commissions and prefunded campaigns back cash rewards. Optional holdings may pay variable income or dividends. Reward redemption need not involve investing. Discounts reduce costs; they are not cash. No protocol token is required.

### Build something you own

Create personal **Bundles** of eligible assets and target weights. Buy, hold, add, sell part or all, rebalance and withdraw eligible settled proceeds. Dedicated subaccounts or approved provider accounts hold actual assets, with custody disclosed. Trading a Bundle trades holdings, not account ownership.

### Trade with a community

**Forage Clubs** combine shared ideas, original meme-inspired art and verified trader histories. “Make it mine” turns a shared plan into a private draft. Joining or following never grants financial authority.

Eligible customers can separately authorize a verified paid trader to manage an isolated strategy account. A mandate defines assets, venues, budget, risk limits and expiry. Traders act within those limits but cannot withdraw to themselves, change ownership or access sibling Bundles. Customers can revoke future authority; prior trades and settlement remain.

### Limited risk sharing

A trader-funded **conduct bond** covers defined accepted breach claims. An optional **market-loss reserve** covers qualifying losses up to each customer's funded cap. Terms state the period, exclusions and claims process. Collateral cannot be pledged twice. Neither guarantees principal or removes investment risk.

### Harvest by choice

Choose an approved route for available rewards or settled proceeds into a personal Bundle or eligible cash destination. Manual review comes first; later rules need separate consent. Proceeds are not all profit; transfers are not new earnings.

### One experience

**Home** shows earnings and results. **Explore** holds offers, trails and Clubs. **Portfolio** holds Bundles, strategy allocations and controls.

Abstract Global Wallet (AGW), local permissions, an independent Railway API and reconciled ledgers sit behind the interface. AI explains, drafts and simulates. Later mirrors carry bounded rules across chains, never copied assets or collateral. Rights, fees and provider limits remain visible.

### Goals and release path

- Make earned money usable and ownership clear.
- Prove the full customer-directed Bundle lifecycle.
- Build reputation from net results and full history.
- Deliver reliable controls, exits and funded claims.
- Sustain growth with contribution after costs.

Launch one approved reward and equity route first. Managed Clubs, fees and coverage need separate legal, provider and security approval. Automation and more markets follow proven customer value.

Planned product. Provider approval and customer eligibility required. Investments can lose value. Income, returns and daily cash payments are not guaranteed. Performance-fee eligibility is restricted where applicable.
